

## ABOUT

I'm 19 and I've been working with AI since I was 17. I picked up AI image-making in July 2025, had a job doing it at an agency by October, and started my own studio the year after. Nobody taught me any of it.

My work is about fashion and the culture around it, streetwear especially, and the place where it runs into luxury. It's why this role is the one I want rather than one I'd take.

What I've got good at is turning something that worked once into something that works every time. Direction gets fixed in writing before anything is generated, so the output has a standard to be judged against.

I built all of that on my own, and doing it alone leaves obvious gaps. What I haven't had is the inside of a working studio: how a team actually runs a job, where craft standards come from, what happens between a brief and a final grade. That's the part I'm here for.

## SKILLS

### Image-making

Art direction, concept development, campaign and editorial stills, fashion film, look development, written direction, grading and finishing

### Generative production

Style and reference conditioning, consistency held across a cast, a collection or a set, image-to-video, multi-shot continuity, matching generated work to a real plate

### Production process

Brand DNA extraction, moodboarding, locking a visual identity before production, then generating into it. Pipeline and reference systems, batch production under one finish, handoff documentation

### Paid, social & practice

Creative direction for Meta at a weekly cadence, hook and ad-copy systems, Instagram strategy and growth. Holding a standard under time pressure, finishing the same whether anyone is checking or not

## EDUCATION

### A-Levels · ABB

Business, Media, Economics

## EXPERIENCE

### Creative Director (project), Hypervail

Oct 2025 – Apr 2026 · Remote · AI-native marketing agency

- Creative director on a consumer pet-grooming brand, concepting through to final output, owning the standard the work had to meet.
- Delivered four videos a week into live Meta campaigns, sustained. Held that cadence by building a documented process rather than prompting harder.
- Worked closely on a second project for a fashion brand.
- Learned how an agency actually runs: briefs, feedback loops, and what separates work that ships from work that stalls.

Client names under NDA.

### Founder, Forvr.Studios

2026 – present · Reading · Independent studio, solo

- Produce campaign stills, fashion film and brand identity work end to end: written direction, look development, generation, grading and finishing.
- Built a website production system and used it to ship eight builds, including forvr.org itself.
- Run the whole thing, so every part of a job lands on me: the concept, the production, the build and the delivery.

### Orwells, Henley

2024 – present

### Co Social Media Manager · Aug 2026 – present

- Took social on alongside the kitchen work. Over 250,000 Instagram views in the first month.
- Content strategy, shooting, editing and posting for a restaurant with a real reputation to protect.

### Head Chef, Streetfood (Thameside Social pop-up) · 2026, one month

- Ran the streetfood offering end to end: menu, prep, service and the people on it.

### Pastry Chef · 2024 – present

- Where the standard got drilled into me. The same dish to the same quality every service, under time pressure, adapting live as the service changes.
- Started at 17 and have been trusted with more of the business every year since.

## BUILT

**FORVR CUT:** browser video editor where the interface collects intent and Claude renders. Every grade control maps to a real ffmpeg filter; footage analysis flags shots that hold too long without motion.

**Motion pipeline:** seven linked stages from idea and script through art direction, image generation, build and render, with sign-off gates between each.

**Brand DNA extractor:** pulls a brand's design system, voice and positioning off its own site into a structured report, so an identity is locked before anything is made.

Also built the studio's deck, task-management and lead-research systems. Happy to walk through any of it.
